EDUCATION

Bachelor of Computer Applications (BCA)
Navgujarat College of Computer Applications
Gujarat University | 2022 – 2025

Master of Computer Applications (MCA)
GLS Institute of Information Technology
Pursuing (2025 – 2027)

SKILLS

- Java
- Python
- React.js

FRAMEWORKS

- Spring Boot (Java)
- Django (Python)
- FastAPI (Python)

DATABASES

- MySQL
- PostgreSQL

WEB TECHNOLOGIES

- HTML
- CSS
- JavaScript

OTHER SKILLS

- Git & GitHub

LANGUAGES

- English
- Hindi
- Gujarati

SHETH ZEEL

Fresher

PROFILE

Enthusiastic and highly motivated IT graduate with a strong foundation in software development, programming, and problem-solving. Skilled in Java, Python, and React.js, with hands-on experience in building web applications and backend systems. Experienced in frameworks like Spring Boot, Django, and FastAPI. Passionate about developing real-world solutions and continuously learning new technologies. A quick learner with strong communication and teamwork skills, eager to contribute effectively in a dynamic IT environment.

ACHIEVEMENTS

- Successfully completed a 3-month internship in PHP development, gaining hands-on experience in backend development and web applications.
- Participated in "Code Relay" event organized under CyberShadez technical fest, showcasing coding and problem-solving abilities in a competitive environment.

ACADEMIC PROJECTS

AI Interview Assistant

Developed an AI-powered interview preparation system that helps users practice technical and HR interview questions. The system analyzes responses, provides intelligent feedback, and improves performance through real-time evaluation. Designed to enhance candidate confidence and interview readiness using modern AI integration.

Universal Bulk Messaging Platform

Designed and developed a scalable bulk messaging platform to send messages to thousands of users efficiently across multiple channels. Implemented features such as contact management, message scheduling, and automated delivery tracking. Focused on optimizing performance for handling high-volume messaging and reducing manual effort for businesses. Built using modern backend technologies with a structured database system for reliability and scalability.

LLM RedForge (AI Code Assistant)

Developed an AI-powered code assistant using Large Language Models (LLMs) to analyze, generate, and debug code. The system helps developers identify errors, optimize code, and understand complex logic through intelligent responses. Integrated backend processing with LLM APIs to simulate real-time coding assistance, making development faster and more efficient.
